4. Date reported: 11/01/2020
Who reported it: Abdoul
Brief description of defect: List name can be empty
Date fixed: 11/01/2020
Who fixed it: Abdoul
Brief description of how it was fixed: Added a new function to check the length of the string value of the HTML input. The function takes a type to check and a HTML id. An alert pops up if invalid
5. Date reported: 11/01/2020
Who reported it: Abdoul
Brief description of defect: item name can be empty
Date fixed: 11/01/2020
Who fixed it: Abdoul
Brief description of how it was fixed: Added a new function to check the length of the string value of the HTML input. The function takes a type to check and a HTML id. An alert pops up if invalid
6. Date reported: 11/01/2020
Who reported it: Abdoul
Brief description of defect: category field can be empty
Date fixed: 11/01/2020
Who fixed it: Abdoul

Brief description of how it was fixed: Added a new function to check the length of the string value of the HTML input. The function takes a type to check and a HTML id. An alert pops up if invalid

7. Date reported: 11/01/2020

Who reported it: Abdoul

Brief description of defect: Price and quantity can be negative despite minlength set via HTML

Date fixed: 11/01/2020

Who fixed it: Abdoul

Brief description of how it was fixed: Added a new function to check the price/quantity ≤ 0 of the string value of the HTML input. The function takes a type to check and a HTML id. An alert pops up if invalid

8. Date reported: 11/01/2020

Who reported it: Abdoul

Brief description of defect: Any input is possible for field value when editing a grocery item

Date fixed: 11/01/2020

Who fixed it: Abdoul

Brief description of how it was fixed: Added a new function to check the value of the field to edit. The fieldValue input changes from type text to select (yes/no) if the field to edit is "organic".

9. Date reported: 11/01/2020

Who reported it: Grant

Brief description of defect: all boxes allow negative numbers which make no sense

Date fixed: 11/01/2020

Who fixed it: Grant

Brief description of how it was fixed: I added a Boolean value that checks if the values are valid and if they aren't you must reenter (for every value)

10. Date reported: 11/01/2020

Who reported it: Grant

Brief description of defect: can't seem to get the weight component to work with the app header

Date fixed: 11/01/20

Who fixed it: Josh

Brief description of how it was fixed: Added in html tag `<app-header></app-header>` that allows header to component to show up

11. Date reported: 11/01/20

Who reported it: Josh

Brief description of defect: Negative number able to be inputted for expense amount

Date fixed: 11/01/20

Who fixed it: Josh

Brief description of how it was fixed: Added in an If-else statement to alert when there is an improper input and changed the input type from number to text

12. Date reported: 11/01/20

Who reported it: Josh

Brief description of defect: Press "Track Weight" and message displays, so button/message doesn't rely on the user inputting numbers

Date fixed: 11/3/20

Who fixed it: Grant

Brief description of how it was fixed: I added boolean values to see if anything was actually inputted

13. Date reported: 11/01/20

Who reported it: Josh

Brief description of defect: Press "Calculate BMI" and message displays, so button/message doesn't rely on the user inputting numbers

Date fixed: 11/3/20

Who fixed it: Grant

Brief description of how it was fixed: Same as defect 12
